Are you ready? Are you sure?

Phthalates & Lead in Substrate Compliance:
Applicable NOW

Phthalates and Lead in Substrate Certification
and Testing by CPSIA Accredited Lab:
Stayed until February 10, 2011 for most products
with some exceptions.

Even if the Stay of Enforcement on Certification and
Testing has been extended, compliance is STILL
required.

With our materials you won't have to worry about
either. Since September 2008, we've produced
materials compliant to the CPSIA Regulation for both
phthalates and lead in substrate. Our tests and
certification reflect the latest developments on the
regulation to give our customers peace of mind and
the documentation they need for traceability.

Don't get caught without it. It's the law.
